

MEM Operations Weekly Report

Week 12 Operations Summary — recurring issues were recorded across dispatch, setup and crew coordination.

Three weekend events required same-day asset substitution due to missing or incomplete event packs before dispatch.

Average setup delay across flagged events: 47 minutes.

Emergency sourcing was triggered twice for LED uplights and one pipe-and-drape set.

Crew lead reported duplicated setup effort because venue team brief was not aligned with final floor plan.

One premium client complaint cited delayed readiness and incomplete item availability on arrival.

Observed pattern: last-minute confirmation changes are not consistently reflected in warehouse dispatch lists.

Recommendation from ops: introduce pre-dispatch readiness sign-off and assign a single event commander per deployment.
